invention relates to a weather strip for a vehicle body, and more particularly to a weather strip for a vehicle body which is provided on a side portion of a vehicle body side opening such as a window glass of a side door in such a manner as to cover the outer side of a window glass when the window glass is closed. 2. Description of the Related Art It has been proposed in the past to provide a weather strip for a vehicle body which is provided on a side portion of a vehicle body side opening such as a window glass of a side door in such a manner as to cover the outer side of the window glass when the window glass is closed. In one of the proposals, the weather strip comprises a panel having a substantially U-shaped cross section and provided with an upper continuous groove and a lower continuous groove, which are formed on the outer side of the weather strip in the lengthwise direction thereof. The groove is provided with a vertically extending outer side flange portion which is formed by extending the outer side of the groove in the lengthwise direction thereof. The groove is provided with a vertically extending inner side flange portion which is formed by extending the inner side of the groove in the lengthwise direction thereof, the inner side flange portion extending in the longitudinal direction of the vehicle and formed by bending the upper and lower portions of the inner side of the groove back towards each other. The outer side flange portion and the inner side flange portion are used to cover and seal the outer side of the window glass when the window glass is closed. See, for example, Japanese Unexamined Utility Model Publication No.
