Plumbing

Plumbing

Plumbing is one of the oldest forms of **mechanical engineering**. Starting with ancient civilizations, agricultural irrigation was the earliest form of plumbing. Soon after, aqueducts, public baths, and even wastewater management started to creep into Egyptian, Roman, and Victorian architecture and infrastructure, respectively.

Building on these humble beginnings, Voltas Engineering has a dedicated department assigned to plumbing design. We are proud to say we are at least a few steps ahead of the 2500-year-old irrigation techniques used by the ancient Egyptians, but simple enough that any quality tradesmen can effectively implement our intuitive designs.

Specializing in townhomes, commercial systems, fire sprinklers, and residential applications, Voltas Engineering is committed to providing long-lasting plumbing solutions to you and your individual needs. We also have our own in-house plumbing system designers, including a dedicated sump pump draftsman and designer. We also do in-depth bathroom plumbing design and layout, and we do **commercial fire sprinkler design** in addition to residential fire sprinkler design. This goes hand in hand with our life safety systems as well.

Meticulously crafted and refined, all of the work that we do at Voltas is full of pride and passion. When working with us, we make sure that all of your requests are addressed, all of your questions are answered, and all of your projects are successful. If there is anything we can do, please let us know, and we will be delighted to help out. **Contact us** at 604-593-2293, or request a quote through our **online application form**.
